DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks on pages 2-6, filed on July 2, 2007, with respect to the 103 rejections have been fully considered and are persuasive. The rejection of claims 1-3 has been withdrawn.

Allowable Subject Matter

2. Claims 1-3 are allowed.

The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method for regulating the operating frequency of a fiber optic gyroscope with a closed control loop, in which the demodulated output signal of the FOG detector, as actual signal, is applied on the one hand to the input of an FOG main controller and on the other hand, via a gating filter as clearly shown, in combination with the rest of the limitations of the claim.

As to claim 3, the prior art of record, taken alone or in combination, fails to disclose or render obvious a multifunctional integrated optical chip for a fiber optic gyroscope in which a digital phase modulator realized by electrodes arranged parallel to

a light guiding path is implemented as at least one functional group as clearly shown, in combination with the rest of the limitations of the claim.

Reference **7,190, 463** discloses a method preventing bias errors resulting from synchronous interference in a fiber-optic gyroscope.

However, it fails to disclose the limitations cited above in claim 1.

Reference **5,157,461** discloses a rate sensor that is adapted for use in inertial reference systems to detect angular rotations and that measure magnitudes and directional sense of the rates of angular rotations.

However, it fails to disclose the limitations cited above in claim 3.
